## Capabilities Statement

Dig Defence, LLC is a midwest company that provides products to deter intruders from entering properties by pushing or digging under existing fencing. Our products extend the protection of any existing fence underground increasing security. All units consist of strong, 4-gauge galvanized steel rods and are made in the US. We assist in getting the most potential from existing perimeter fencing.

## Core Competencies

- Trenchless, humane, underground barrier
- Invasive Animal Control
- Maximize Existing Fencing
- Interlocks with Chain Link fencing to "tie" to ground
- Threat Hotspot Mitigation
- Special Installation Tool

## Differentiators

We have *no real competitors* at this time. Our products extend the protection of any existing fence (chain link, wood, vinyl, etc.) underground without digging a trench or pouring concrete. When using our DDAC product at your site the expense is a fraction of the cost compared to other solutions, ie: pouring concrete, installing new fence, digging trench to bury additional fencing. Easy and fast installation, can be (and has been) installed by facility maintenance departments. Currently work with Lowe's, Tractor Supply, Petco, and Kroger to offer our residential models.

## Past Performance *(more references available upon request)*

- Naval Air Station Pensacola, FL
- Luke Airforce Base
- Charlotte Douglas International Airport
- Hartsfield Jackson Atlanta International Airport
- Fairchild Airforce Base
- Naval Air Station Kingsville, TX

Each unit is 48" in length, 15" in depth with 1.5" spike spacing.
